Fizika

9-sinf

Mavzu: **Ko‘z va ko‘rish.**

Ko‘zning tuzilishi

1–sklera;

2–shoh parda;

3–tomirli qobiq;

4–kamalak qobiq;

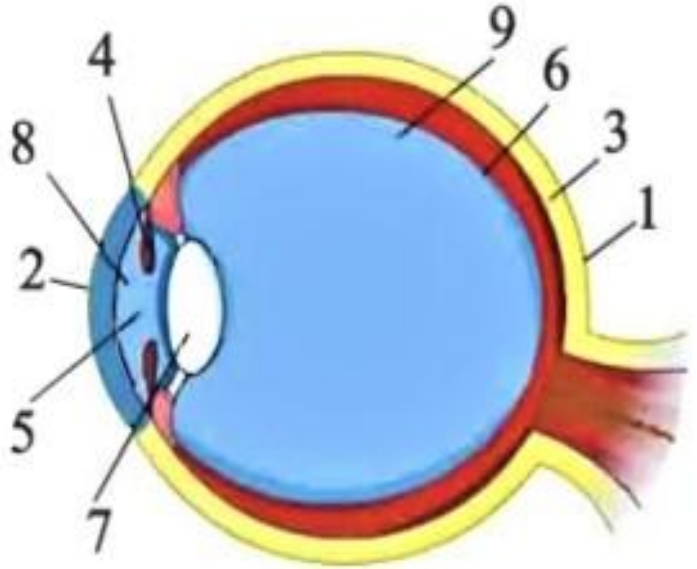

5–qorachiq;

6–to‘r parda;

7–gavhar;

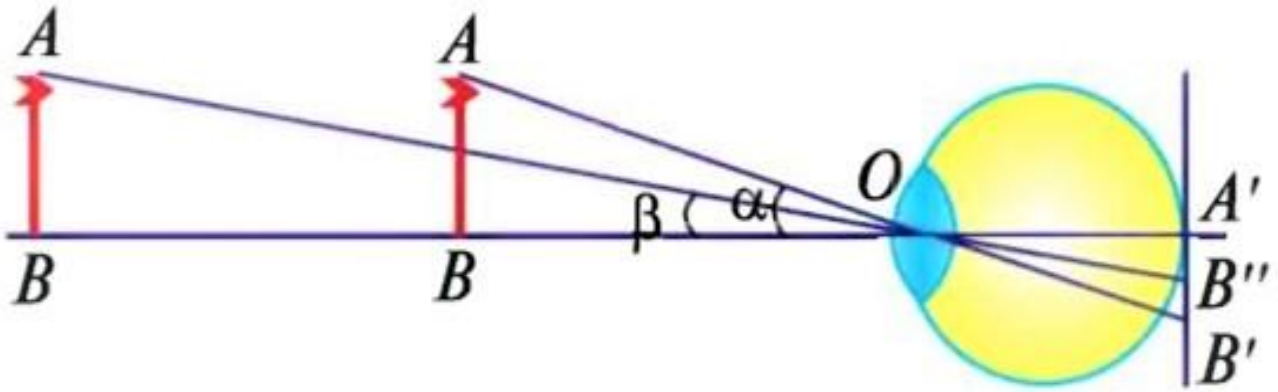

8–shishasimon suyuqlik;

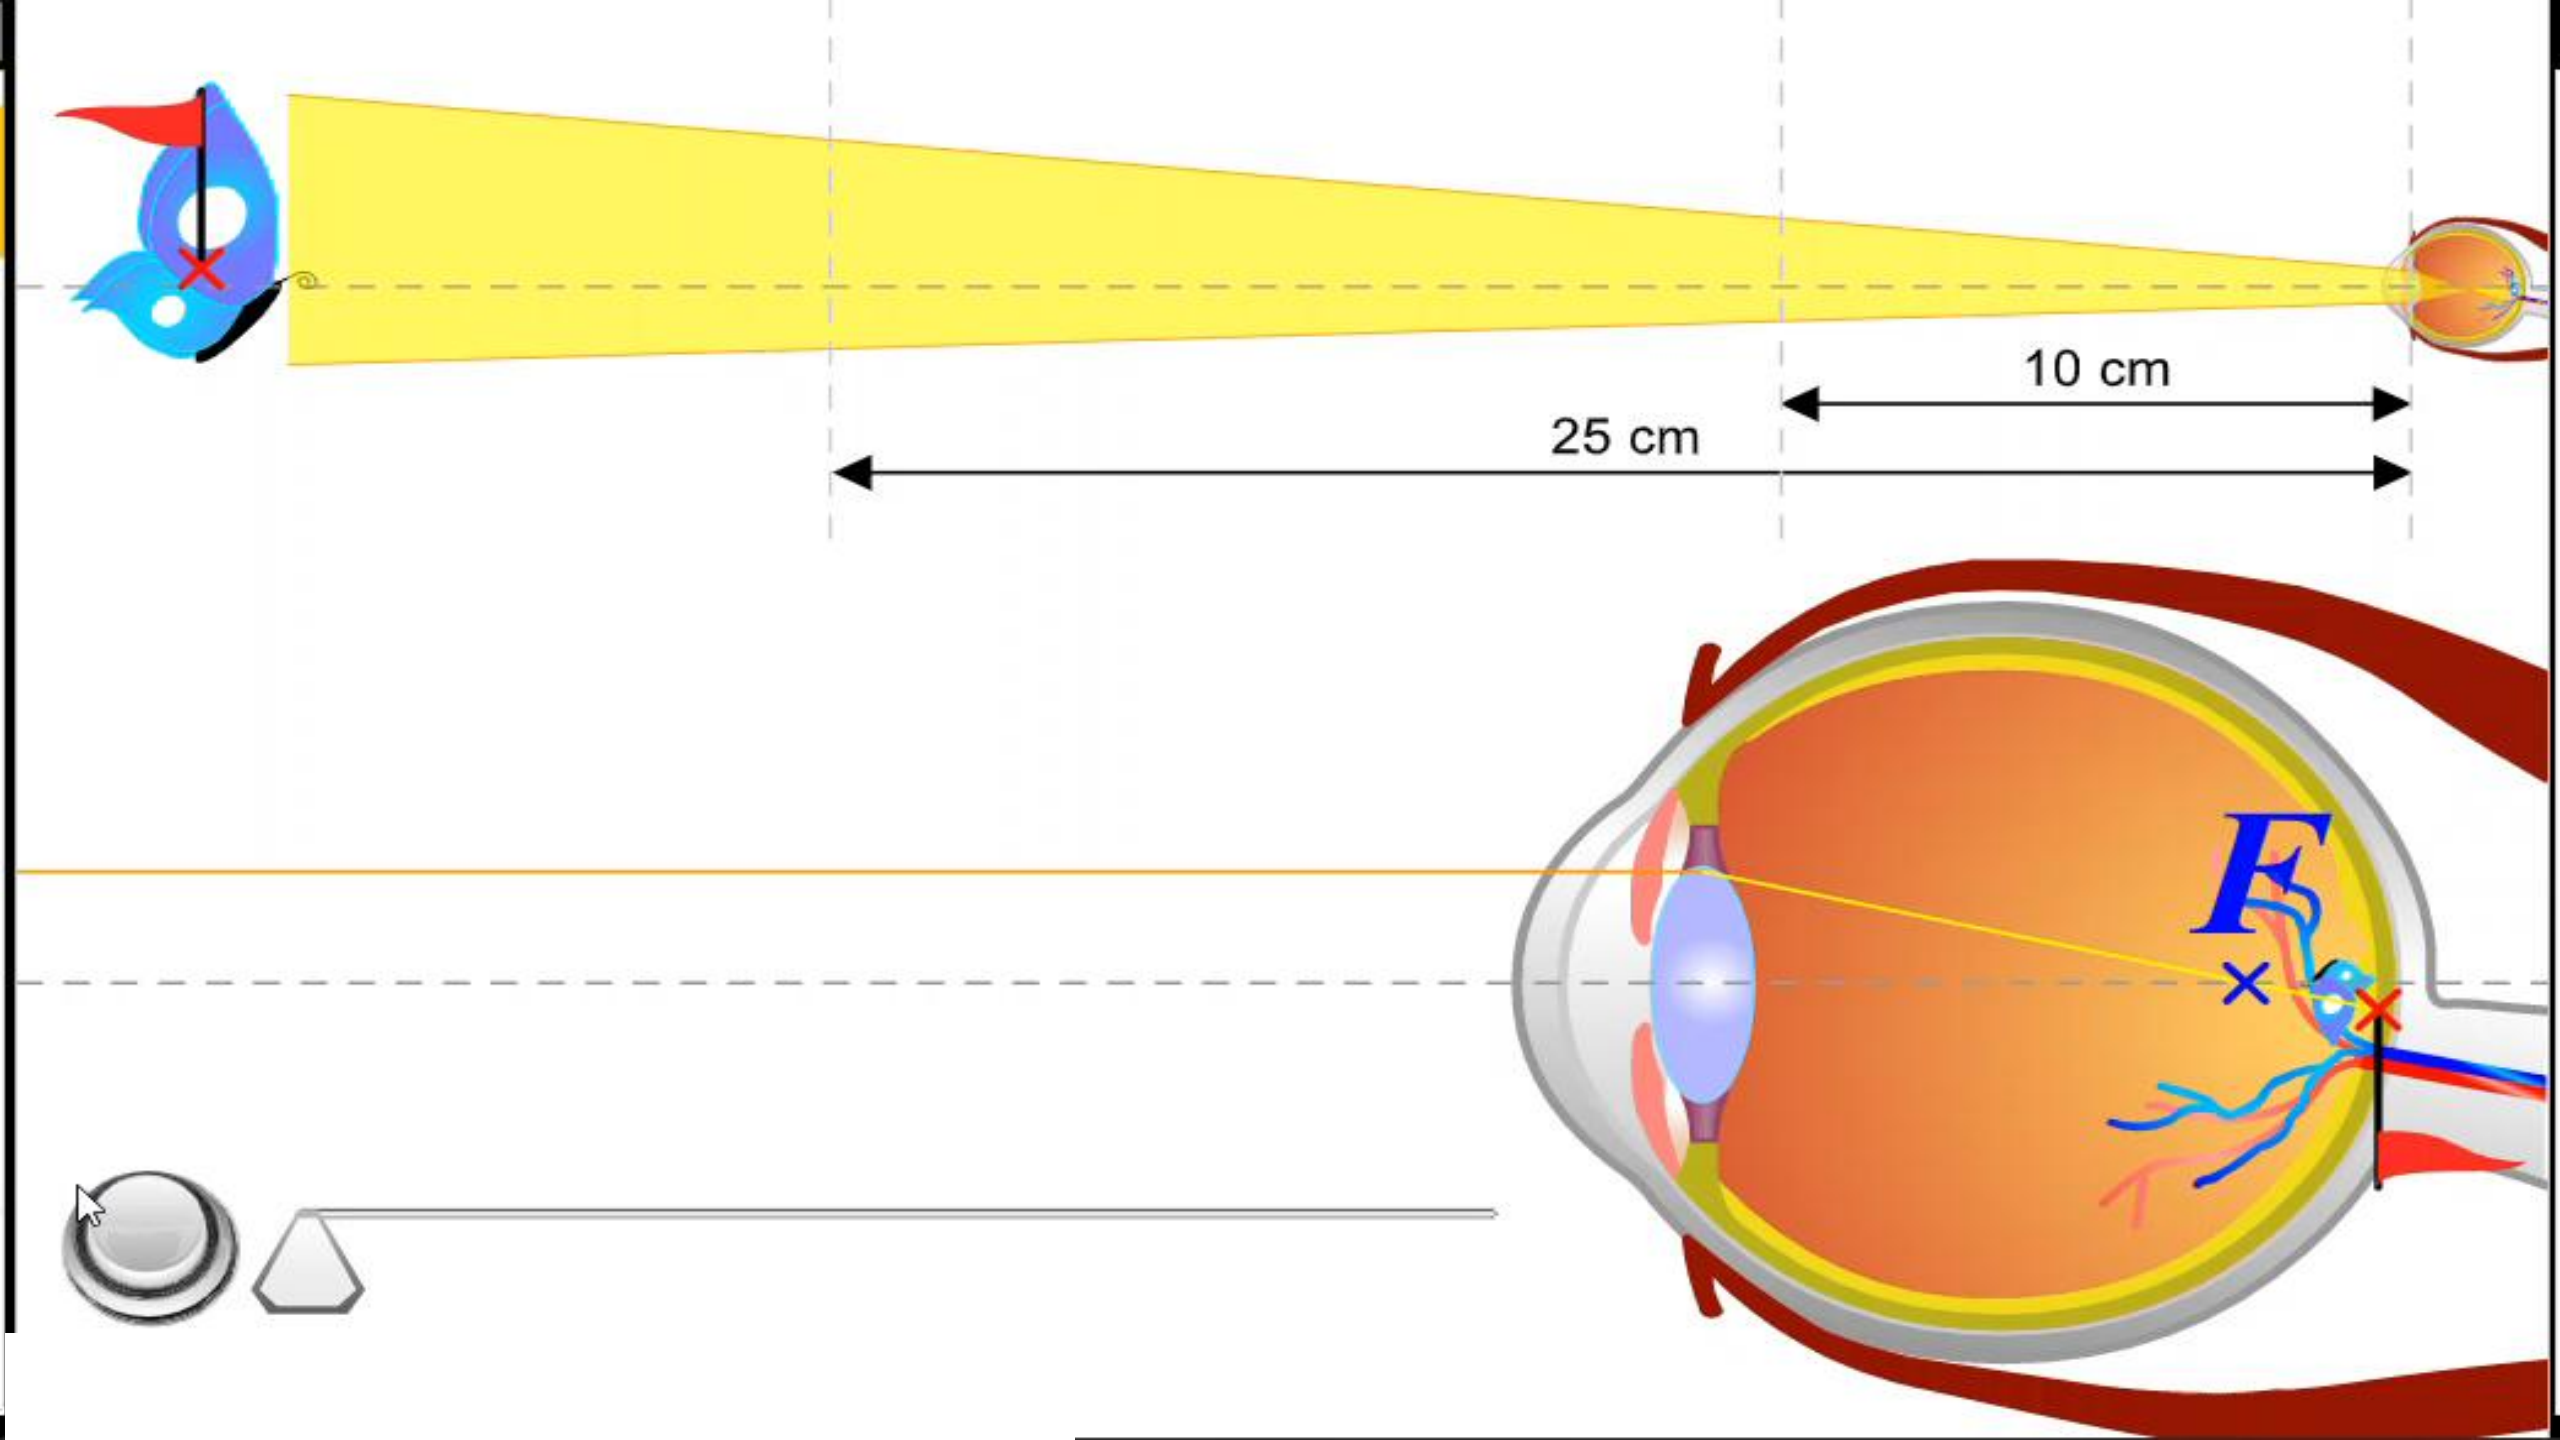

9–shishasimon jism.

Ko‘rish

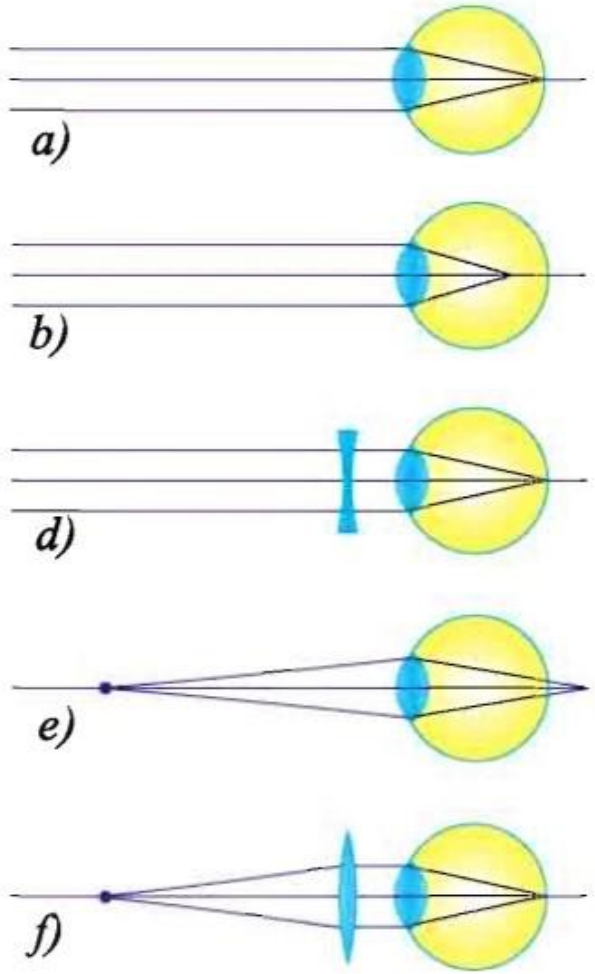

Buyumga qaralganda undan kelayotgan nur ko‘zga tushadi va to‘r pardada buyumning haqiqiy, kichiklashgan va to‘nkarilgan tasviri hosil bo‘ladi.

10 cm
25 cm
F

Ko‘rishdagi defektlar. Ko‘zoynak

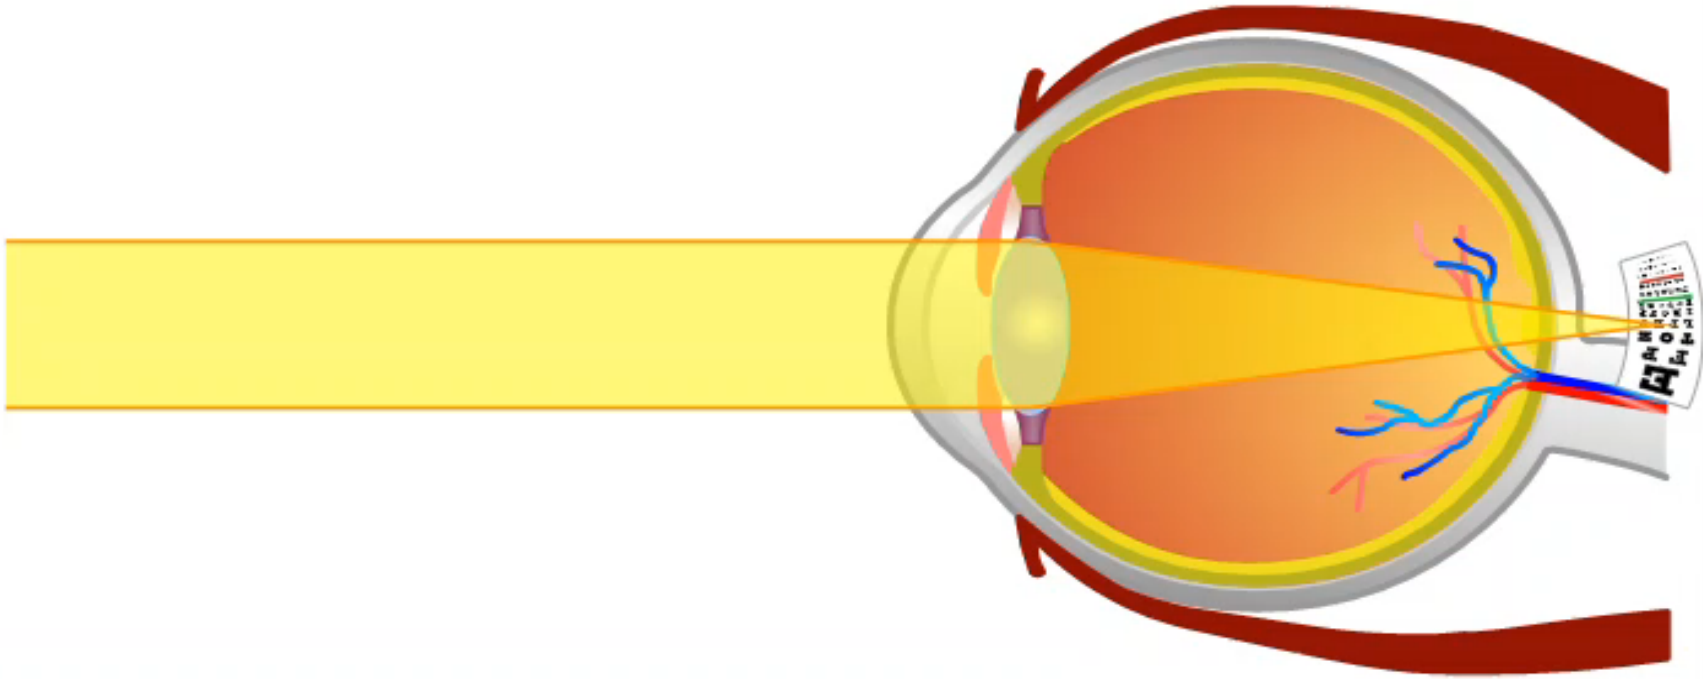

Yaqindan ko‘rarlik ko‘zlarda gavharning fokus masofasi me’yordan kam, ya’ni optik kuchi kattaroq bo‘ladi.

Uzoqdan ko‘rarlik ko‘zlarda gavharning fokus masofasi me’yordan katta, ya’ni optik kuchi kichikroq bo‘ladi.

Uzoqdan va yaqindan ko‘rarlik

29-mashq 4-masala (157-bet)

O‘quvchi bola optik kuchi -4 dioptriya bo‘lgan ko‘zoynakda o‘qimoqda. Uning ko‘zoynaksiz eng yaxshi ko‘rish masofasi qanday?

Berilgan:

$D_{ko'zoynak} = -4\ dptr$

$D_0 = 25\ \text{cm} = 0{,}25\ \text{m}$

Topish kerak: $a - ?$

Formula:

$$D_n = \frac{1}{D_0}$$

$$D_n = \frac{1}{a}$$

$$\frac{1}{a} = D_n - D_{ko'zoynak}$$

$$a = \frac{1}{D_n - D_{ko'zoynak}}$$

Yechish: $D_n = \frac{1}{0{,}25\ m} = 4\ \text{dptr}$

$$a = \frac{1}{4\ dptr - (-4\ dptr)} = \frac{1}{8}\ \text{m} = 0{,}125\ \text{m} = 12{,}5\ \text{cm}$$

Javob: $\boldsymbol{a = 12,5\ cm}$

Mustaqil bajarish uchun topshiriqlar

1. Mavzuni o‘qish va savollarga javob yozish.(156-bet)

2. 29-mashqning 5-masalasini yechish.(157-bet)
